

PROGRAM EXAMPLE

You work at a community development organization that seeks to provide needed resources to your neighborhood. There is an under-resourced elementary school in the neighborhood that has approached your agency asking you to run an after-school program at their site. You can use their facility for free, 5 days/week at no cost. They ask that you provide academic supports to help improve literacy and math scores and also provide recreational activities to keep the kids engaged and safe. The main goal, for the school, is that at least 30% of the kids in the school participate in the after-school program. They also want to see test scores and grades improve. The school also hopes that this program will help improve student behavior, but their main goal is academic support.

OUTCOMES:

- Students participate in after school program
- Students improve test scores
- Students improve grades
- Student behavior improves during school hours
